PN-2474B

PN-2475D/F

NISSAN Automobile Genuine 6 Disc CD Changer

Model **PN-2474B-A**
(Genuine No.28184 CR000)

Model **PN-2475D-A**
(Genuine No.28184 6Y300)

Model **PN-2475F-A**
(Genuine No.28184 AV700)
(Horizontal type)

Model **PN-2475F-B**
(Genuine No.28184 AV710)
(Vertical type)

SPECIFICATIONS

Frequency response:	17Hz to 20kHz(±2dB)
Channel separation:	More than 70dB(1kHz,20kHz LPF)
Total harmonic distortion:	Less than 0.02%(20kHz LPF)
Output level:	3V±2dB(1kHz,0dB)
Power supply voltage:	13.2V DC (10.8 to 15.6V allowable)
Ground:	Negative
Current consumption:	1A
Dimensions(mm):	
PN-2474	225(W)×67(H)×161(D)
PN-2475	225(W)×64(H)×172(D)
Weight:	1.85kg(PN-2474) 1.65kg(PN-2475)

NOTES

- ※ Do not play heart-shaped, octagonal, or other specially shaped CDs.
- ※ We cannot supply PWB with component parts in principle. When a circuit on PWB has failure, please repair it by component parts base. Parts which are not mentioned in service manual are not supplied.
- ※ Specifications and design are subject to change without notice for further improvement.

COMPONENTS

PN-2474B-A/PN-2475D-A/F-A/F-B

Main unit	-----	1
Lock pin	335-0594-21	3

To engineers in charge of repair or inspection of our products.

Before repair or inspection, make sure to follow the instructions so that customers and Engineers in charge of repair or inspection can avoid suffering any risk or injury.

1. Use specified parts.

The system uses parts with special safety features against fire and voltage. Use only parts with equivalent characteristics when replacing them.

The use of unspecified parts shall be regarded as re-modeling for which we shall not be liable. The onus of product liability (PL) shall not be our responsibility in cases where an accident or failure is as a result of unspecified parts being used.

2. Place the parts and wiring back in their original positions after replacement or re-wiring.

For proper circuit construction, use of insulation tubes, bonding, gaps to PWB, etc, is involved. The wiring connection and routing to the PWB are specially planned using clamps to keep away from heated and high voltage parts. Ensure that they are placed back in their original positions after repair or inspection.

If extended damage is caused due to negligence during repair, the legal responsibility shall be with the repairing company.

3. Check for safety after repair.

Check that the screws, parts and wires are put back securely in their original position after repair. Ensure for safety reasons there is no possibility of secondary problems around the repaired spots.

If extended damage is caused due to negligence of repair, the legal responsibility shall be with the repairing company.

4. Caution in removal and making wiring connection to the parts for the automobile.

Disconnect the battery terminal after turning the ignition key off. If wrong wiring connections are made with the battery connected, a short circuit and/or fire may occur. If extensive damage is caused due to negligence of repair, the legal responsibility shall be with the repairing company.

5. Cautions regarding chips.

Do not reuse removed chips even when no abnormality is observed in their appearance. Always replace them with new ones. (The chip parts include resistors, capacitors, diodes, transistors, etc). The negative pole of tantalum capacitors is highly susceptible to heat, so use special care when replacing them and check the operation afterwards.

6. Cautions in handling flexible PWB

Before working with a soldering iron, make sure that the iron tip temperature is around 270°C. Take care not to apply the iron tip repeatedly (more than three times) to the same patterns. Also take care not to apply the tip with force.

7. Turn the unit OFF during disassembly and parts replacement. Recheck all work before you apply power to the unit.

8. Cautions in checking that the optical pickup lights up.

The laser is focused on the disc reflection surface through the lens of the optical pickup. When checking that the laser optical diode lights up, keep your eyes more than 30cms away from the lens. Prolonged viewing of the laser within 30cms may damage your eyesight.

9. Cautions in handling the optical pickup

The laser diode of the optical pickup can be damaged by electrostatic charge caused by your clothes and body. Make sure to avoid electrostatic charges on your clothes or body, or discharge static electricity before handling the optical pickup.

- 9-1. Laser diode

The laser diode terminals are shorted for transportation in order to prevent electrostatic damage. After replacement, open the shorted circuit. When removing the pickup from the mechanism, short the terminals by soldering them to prevent this damage.

- 9-2. Actuator

The actuator has a powerful magnetic circuit. If a magnetic material is put close to it. Its characteristics will change. Ensure that no foreign substances enter through the ventilation slots in the cover.

- 9-3. Cleaning the lens

Dust on the optical lens affects performance. To clean the lens, apply a small amount of isopropyl alcohol to lens paper and wipe the lens gently.

CAUTIONS

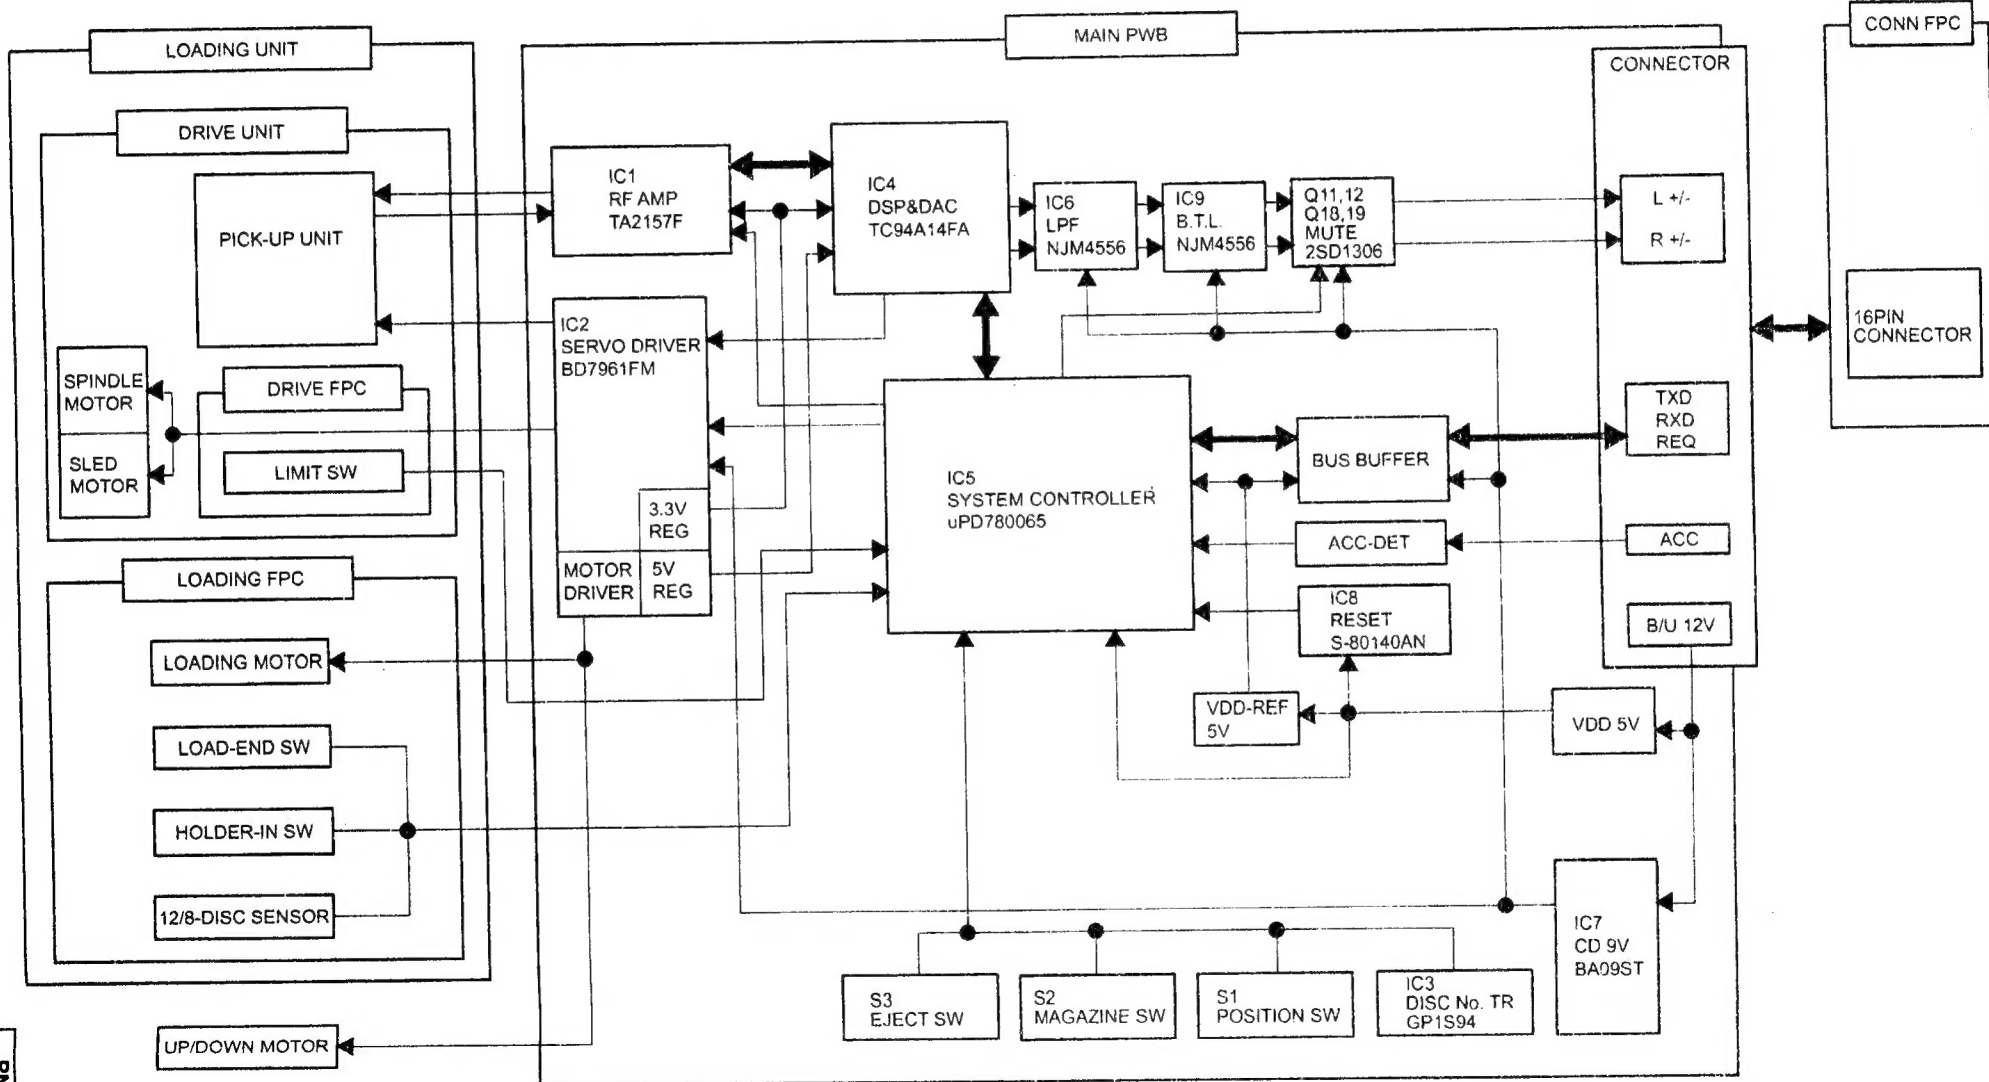

Use of controls, adjustment or performance of procedures other than those specified herein, may result in hazardous radiation exposure.

The COMPACT DISC player and MINI DISC player should not be adjusted or repaired by anyone except properly qualified service personnel.

This appliance contains a laser system and is classified as a "CLASS 1 LASER PRODUCT". To use this model properly, read this Owner's Manual carefully and keep this manual for your future reference. In case of any trouble with this player, please contact your nearest "AUTHORIZED service station". To prevent direct exposure to the laser beam, do not to open the enclosure.

pin 39: Disk No Tr	: IN: The photo transistor signal input for the disk number detection.
pin 40: 8cm DISC	: IN: 8cm disk = "L", 12cm disk = "H".
pin 41: POS SW	: IN: Datum point signal input to detect the disc number.
pin 42: LIMIT	: IN: Inside limit switch signal input for the disk.
pin 43: HOLDER IN	: IN: "L" = Holder has been placed in the magazine.
pin 44: LOAD END	: IN: "L" = Holder has been removed from the magazine.
pin 45: VSS	: - : Negative supply voltage.
pin 46: VDD	: - : Positive supply voltage.
pin 47: PON 2	: O: Power ON signal output.
pin 48: PON 1 INV	: O: The inverted signal of PON 1(pin 73).
pin 49: UD CW	: O: Up/down motor control signal output. Refer Table 1.
pin 50: UD CCW	: O: Up/down motor control signal output. Refer Table 1.
pin 51: LD CW	: O: Loading motor control signal output. Refer Table 2.
pin 52: LD CCW	: O: Loading motor control signal output. Refer Table 2.
pin 53: DR MUTE	: O: Drive mute signal output to the CD IC.
pin 54: GV SW	: I/O: Gain select signal input/output.
pin 55: RESET	: O: Reset signal output.
pin 56: CCE	: O: The chip enable signal output.
pin 57: BUC CLOCK	: O: CD IC clock pulse output.
pin 58: BUS 3	: I/O: CD IC Data input / output.
pin 59: BUS 2	: I/O: CD IC Data input / output.
pin 60: BUS 1	: I/O: CD IC Data input / output.
pin 61: BUS 0	: I/O: CD IC Data input / output.

pin 62: NU	: - : Not in use.
pin 63: TEST 1	: IN: For the test.
pin 64: TEST 2	: IN: For the test.
pin 65: TEST 3	: IN: For the test.
pin 66: TEST 4	: IN: For the test.
pin 67: NU	: - : Not in use.
pin 68: REQ O	: O: Transmil request signal output.
pin 69: TXD	: O: The serial data output.
pin 70: RXD	: IN: The serial data input.
pin 71: NU	: - : Not in use.
pin 72: A MUTE	: O: The audio mute signal output.
pin 73: PON 1	: O: Power ON signal output.
pin 74: NU	: - : Not in use.
pin 75: NU	: - : Not in use.
pin 76: NU	: - : Not in use.
pin 77: SCK	: IN: The clock pulse input.
pin 78: SO	: O: Serial data output.
pin 79: SI	: IN: Serial data input.
pin 80: A VSS	: - : Analog ground.
